

# KLE GH BCA COLLAGE HAVERI

**Orientation Program – Day 1**

**Date:** 23rd July 2026

**Theme:** *A New Beginning Towards Success*

Presented by: BIBI AYISHA S HALAGERI

July 23 – 28, 2026

# Saraswati Pooja

## Day 1: Welcome & Campus Introduction

As students witness the Saraswati Pooja, they feel a quiet sense of gratitude, hope, and belonging. The blessings around them fill the moment with warmth and positivity, calming their nerves and lifting their spirits. It becomes a beautiful beginning, reminding them that their journey ahead is guided by wisdom, faith, and fresh possibilities.

# Campus Introduction

KLE Society was founded in 1916 by seven visionaries, the Saptarishis, with a mission to provide quality education to common people. From its beginnings in Belgaum, the Society steadily expanded across regions to establish colleges and institutions that brought learning closer to communities. As part of this broader growth, KLE GH College at Haveri was established in 1963. Its implementation strategy reflects a strong balance of academic excellence and social responsibility, ensuring education serves both personal growth and public good.

# Team Building Activities

Team building activities were one of the most fun and exciting parts of our class, and we truly enjoyed every moment of them. It was such a joyful experience to take part in activities that brought so much positive energy, laughter, and togetherness. At first, some of us felt a little shy, but the warm atmosphere helped us open up, make new friends, and feel welcomed and included right away. These activities created memorable moments that we will always cherish because they brought us closer as a class and made us feel like a real team.

# Day 2:

# Academics & Fundamentals

The BCA curriculum is designed to build a strong foundation in computer applications through a balanced mix of programming, mathematics, database management, operating systems, and core IT subjects. Students are evaluated through theory examinations, practical lab exams, internal assessments, assignments, seminars, and project work, which together measure both conceptual understanding and hands-on skills. Academics are usually conducted through classroom teaching, laboratory sessions, tutorials, presentations, and regular guidance from faculty to help students stay prepared throughout the semester. Continuous learning is especially important in BCA because technology changes quickly, and students are expected to practice coding, revise concepts, and apply what they learn in real situations. Overall, students can expect a structured academic journey that develops technical knowledge, problem-solving ability, and confidence for higher studies or IT careers.

# Computer Basics

This session introduces the basics of computers, including the main hardware components such as CPU, RAM, and storage. Students also learn computer architecture, different types of software applications, and the role of operating systems in managing everyday tasks. It covers practical skills like keyboard and mouse usage, file management, internet basics, basic troubleshooting, and data security awareness. By the end, learners gain a clear understanding of how computers work and how these skills support their success as BCA students. These fundamentals build confidence for further study in programming, networking, and other core computer subjects.

# Scholarship Information

Scholarships are available in several forms, including merit-based, need-based, government-funded, and institution-specific awards. Eligibility usually depends on academic performance, family income, attendance, or other criteria set by the scholarship provider. Scholarship amounts may range from partial fee support to full tuition coverage, and some programs also include allowances for books, transport, or other study expenses. Students typically apply by submitting an application form, academic records, income certificates, and other required documents before the deadline. These scholarships reduce financial burden, encourage academic success, and help students continue their education with greater confidence and support.

# Team Building Activities

During our team building activities, we started by introducing ourselves to each other and sharing our names and backgrounds. At first, I felt a little nervous, but speaking up helped break the ice and made the room feel more comfortable. I enjoyed learning about my classmates' interests and goals, and hearing their personal stories helped me connect with them more easily. These introductions made it easier to build friendships and create a sense of community. By the end, I felt like I truly belonged in the group.

# Day 3: Emotional Intelligence

Emotional intelligence is the ability to understand, manage, and respond to emotions in a healthy and thoughtful way. For students, self-management is essential in academic and personal life because it helps them stay focused, make better decisions, handle setbacks calmly, and build positive relationships with peers and teachers. Emotions can strongly affect learning, motivation, and behavior, so recognizing stress early and using techniques like deep breathing, time management, and taking short breaks can improve performance and well-being. Building resilience also helps students recover from challenges, stay confident, and keep improving even when things feel difficult.

Parents play an important role in supporting this growth by listening with empathy, modeling calm responses, encouraging open communication, and helping children reflect on their feelings and actions. When students and parents work together, emotional intelligence becomes a lifelong skill that strengthens confidence, responsibility, and healthy relationships.

# Team Building Activities

I really enjoyed the evening team building activities because they were fun, exciting, and full of positive energy. We took part in different activities that encouraged us to talk, work together, and share ideas, which made it easier to step out of our comfort zones. At first, I felt shy, but the laughter, friendly support, and playful moments helped me relax and open up more naturally.

# Day 4: Professional Communication

→ Communication Skills

Bhavana Mam & Saiana Bankar

→ Learning Strategies

Building effective study habits

→ Campus Tour

Explore your new home

As a BCA student, I realized that communication is important because it helps me explain ideas clearly, participate in class, and work better in group activities. It supports both academics and career growth by improving speaking, listening, and presentation skills, which are useful during seminars, interviews, and team discussions. I also learned how to overcome nervousness and build confidence while interacting with others, especially when sharing my thoughts in front of a group. Good communication has made it easier for me to connect with peers and mentors, and it has strengthened my relationships both inside and outside the classroom.

During the campus tour, I got to explore different areas of the college and discover facilities like labs, libraries, classrooms, and recreational spaces. It helped me become more familiar with the campus environment and understand where different departments are located. Seeing everything in person made me feel more comfortable and confident about my new college home.

# Day 5: Digital Engagement

Social Media & Rotract Club

Asha Ramesh

Student Feedback Session

Your voice matters

Self-Learning Activity

Independent exploration

From a student's perspective, social media is a great way to connect with peers, share experiences, and stay updated about what's happening on campus. It also helps me build an online presence by sharing my interests, achievements, and creative work. Through college pages, groups, and posts, I can engage with the wider college community and feel more connected to everyday student life.

The Rotract Club is a student-led service organization that encourages young people to work together for positive change. Its purpose is to develop leadership, social responsibility, and teamwork through meaningful activities. By taking part in community service, awareness drives, and campus events, students learn to contribute to society while making college life more active and enriching.

# Program Highlights

## Interactive Faculty Sessions

Learn directly from experienced mentors and industry experts

## Campus Exploration

Discover labs, libraries, and spaces that will define your college life

## Team Building Activities

Build friendships and collaboration skills from day one

Interactive faculty sessions help students learn directly from experienced mentors and industry experts, making the experience both engaging and meaningful. Through interactive learning, students can ask questions, clarify doubts, and gain practical insights that connect classroom ideas with real-world knowledge. These sessions also inspire and guide students as they navigate their academic growth and future career journey.

Campus exploration gives students the chance to discover different areas of the campus and become familiar with labs, libraries, classrooms, and recreational spaces. It also helps them understand the campus layout and facilities, making it easier to move around with confidence. By exploring early, students feel more comfortable navigating college life and can make the most of the resources available to them.

# Your Journey Begins!

Welcome to KLE GH BCA

Five inspiring days. Lifelong connections. An extraordinary future ahead.
